## Technical Data Sheet

**SANDSTROM #103**

**SOLID FILM LUBRICANT: HEAT CURE**

**SERIES E106**

**READY-TO-APPLY SPRAY APPLICATION**

### Description

Sandstrom #103 contains molybdenum disulfide, PTFE and corrosion inhibiting pigments. This material prevents galling and provides unique wear properties, corrosion protection and exceptional chemical and fluid resistance. Sandstrom #103 can be applied over all metals by spray application.

### Outstanding Features/Benefits

- No viscosity change at varying temperatures
- Ready to apply - no thinning necessary
- Offers some of the highest corrosion protection for manganese phosphate and grit blasted bare steel of the Sandstrom dry film lubricant line
- **CONTAINS NO GRAPHITE**

### Limitations

- Do not use where there is potential for contact with food.
- Product is not LOX compatible

### Notice

Before using this product, read all warnings, limitations and safety information printed on the product label, Safety Data Sheet (MSDS) and Technical Data Sheet.

### Typical Uses

- Automotive starter shafts

Additionally, Sandstrom #103 is an excellent solution to the problem of lubricating parts:

- That may be operated in corrosive atmospheres
- That may be stored for long periods
- That are seldom lubricated once they leave the factory and where permanent lubrication is desired
- Where operating pressures exceed the load-bearing capacities of ordinary oils and greases
- Where "clean operation" is desired - will not collect dirt and debris like grease and oils
- Where parts may be subjected to frequent disassembly
- Where a protective coating and sacrificial break-in lubricant is needed
- Where fretting and galling is a problem (such as splines, universal joints and keyed bearings)
- Where easy release is desired (such as threads of all kinds)

** NOTICE**

We warrant our products to be free of manufacturing defects and that they meet our current published physical properties and specifications. All information and suggestions presented are rendered gratis and are accurate to the best of our knowledge. They are based on technical data we believe to be reliable and are intended for use by persons having skill and “know how” at their own discretion and risk. Prior to use, customers are cautioned to determine the suitability of our products for any given application through their own testing. NO WARRANTY IS MADE, EXPRESS OR IMPLIED, REGARDING SUCH INFORMATION, THE DATA ON WHICH IT IS BASED OR THE RESULTS OBTAINED FROM ITS USE OR THAT OUR PRODUCT SHALL BE MERCHANTABILITY OR FIT FOR ANY PARTICULAR PURPOSE. SUCH STATEMENTS ARE NOT INTENDED TO SUGGEST INFRINGEMENT OF ANY PATENT. Since conditions of use of our products are beyond our control, all suggestions and statements are made without guarantee, warranty or other responsibility, express or implied, on our part. We assume no responsibility for results obtained, or damages incurred, from their use beyond replacing material proved to be defective or refunding the purchase price of such material at our option. Acceptance of delivery of our product means you have accepted the terms of this warranty, whether or not purchase orders of other documents state terms that vary from this warning. No seller is authorized to make any representations or warranty or assumes any other liability on our behalf with any sales of our products. SANDSTROM PRODUCTS COMPANY

GENERAL
Sandstrom #103 is a paint-like material consisting of lubricative pigments dispersed in a thermostetting resin system thinned with appropriate solvents. For maximum service, the APPLICATION INSTRUCTIONS MUST BE FOLLOWED CLOSELY.

FILM THICKNESS & ENGINEERING TOLERANCE
As supplied, Sandstrom #103 will yield a film thickness of about 0.0005 inches per coat. Usually engineering tolerances will permit necessary minimum film build up of 0.0002 to 0.0003 inches without interference. If excess buildup does occur and a force fit is necessary, burnishing lightly will assist in mating the parts. The remaining excess will be worn away in the first few cycles of operation. Whenever possible, the proper tolerances should be designed into the part.

COVERAGE
One gallon of this material will cover 672 sq. ft. with a dry film thickness of 0.0005 inches. Coverage depends upon method of application and other variables such as overspray and type of surface to be coated. Above coverage rates are based on 100% efficiency.

SURFACE PREPARATION
Please contact Sandstrom Products Company for substitute surface preparations if recommended steps cannot be followed.

Application on steel, Pre-clean surface with aliphatic naphtha or any other EPA compliant cleaner that sufficiently cleans surface to pass ASTM F22. Abrasive blast surface with 180-220 grit aluminum oxide (25-50 RMS optimum). Phosphate IAW MIL-DTL-16232 (weight should be 11-22 g/m²), type M, class 3 (optimal performance) or type Z, class 3.

Application on stainless steel, Pre-clean surface with aliphatic naphtha or any other EPA compliant cleaner that sufficiently cleans surface to pass ASTM F22. Abrasive blast surface with 180-220 grit aluminum oxide (25-50 RMS optimum). Passivate surface.

Application on aluminum, Pre-clean surface with aliphatic naphtha or any other EPA compliant cleaner that sufficiently cleans surface to pass ASTM F22. Sulfuric acid anodize IAW MIL-A-8625 Type I, II or III Class 1.

Application on titanium. Solvent wash (non-chlorinated) and alkaline anodize (Todize Type I or II).

Application on copper alloys, Pre-clean surface with aliphatic naphtha or any other EPA compliant cleaner that sufficiently cleans surface to pass ASTM F22. Pretreat surface using one of the following methods (in order of preference):

a) Black oxide treat (according to MIL-F-495).

b) Bright dip or grit blast (25 - 50 RMS optimum).

IMPORTANT! DO NOT TOUCH CLEAN SURFACE WITH FINGERS - OIL FROM THE HANDS WILL INTERFERE WITH PROPER COATING ADHESION. Whenever possible, treat both contact surfaces (i.e., the shaft and the bearing).

STIRRING
IMPORTANT! THIS LUBRICANT CONTAINS HEAVY PIGMENTS WHICH SETTLE RAPIDLY, THEREFORE, IT SHOULD BE STIRRED THOROUGHLY BEFORE USE AND CONTINUOUSLY DURING APPLICATION.

THINNING
Use Sandstrom #103 as supplied. No thinning is necessary.

APPLICATION
Keep container closed when not in use to keep loss of solvents at minimum and avoid change in volume solids.

For conventional spray, Sandstrom #103 may be applied by conventional spray.

For dip application, Please contact Sandstrom Products Company for more information if preferred method of application is dip application. A variation of Sandstrom #103 original formula is available for dip application.

BAKING
Flash off coated parts at 77°F ± 5°F and ≤ 70% relative humidity for at least 30 minutes before baking.

Bake for 30 minutes at 350°F or 15 minutes at 400°F.

NOTE: If blistering occurs, solvent is being entrapped and flash-off time and/or solvents may need to be adjusted.

IMPORTANT! The time begins when the part has reached temperature, NOT when it is placed in the oven. In cases of very thick metals, extra time may be required to bring the part up to the proper temperature. Thermocouples may be used to determine the true temperature of the metal.

IT IS IMPERATIVE TO USE A PROPERLY VENTED OVEN (DIRECT VENT TO THE OUTSIDE).

CLEANUP
Use Methyl Ethyl Ketone for cleaning tools.

REMOVAL
In the event it is necessary to remove product, physical removal is best (such as grit blasting, sanding or grinding).

WARNINGS: Constant stirring is imperative for best results.

DANGER! USE WITH ADEQUATE VENTILATION.

IMPORTANT NOTICE TO BUYER / WARRANTY AND LIMITATIONS ON OUR LIABILITY
We warrant our products to be free of manufacturing defects and that they meet our current published physical properties and specifications. All information and suggestions presented are rendered gratis and are accurate to the best of our knowledge.
